

Project Name: Princess Grace Hospital Chillers Replacements

Location: Marylebone

Started: January 2020

Completed: February 2020

Ellis Building Services Ltd were appointed as the Mechanical Subcontractor on this project, to carry out the complete replacements of two MRI chillers that were serving live MRI units.

The units were old and dilapidated and required a quick turnaround replacement, to ensure that there was no downtime to the MRI.

EBS successfully prepared both chiller sites before the installation, so that the final replacement works over the weekend were simple, straightforward, and effective.

With the crucial operation of the MRI's to the site, all works were planned and undertaken out of working hours over a weekend. Each chiller was craned into position and running by Monday morning, with no downtime to the private clinics run time Monday to Friday.
